# Genesis Prosthetic Arts

**Bone Anchored  
Auricular Prosthetics  
by David Van Auker, MA, CP, CCA**

Advancing maxillofacial prosthetics  
one patient at a time!

Ear loss or disfigurement due to accident or ablative surgery can't always be addressed with cosmetic or plastic surgery. When a prosthesis becomes necessary, David Van Auker, MA, CP, CCA works with the patient and the physician to provide quality care from pre-op consultation to the final brush stroke. Maxillofacial prosthetics is both an art and science that blends together to restore the quality of life to the facially disfigured.

With almost 20 years experience in anaplastology, David can work with the patient and the surgeon to offer the best treatment plan, from pre-operative strategy to final prosthetic fitting. He encourages involvement from the earliest point possible for each case.

Many of these services are recognized by insurance providers including Medicare. All consultations are free.

## See the change a good prosthesis can make!

Finished prosthesis

The Pin System is one of several types of retention systems

Wax try-on piece in place

David is constantly updating his skills to ensure the best care available. His current efforts are in cultivating the use of bone anchored systems which use magnets or clips to hold the prosthesis in place. This frees the patient from the use of adhesives which can be messy, time consuming, and reduce the patient's confidence in the suspension.

Silicone technology is changing as well, with new materials that are more durable and have improved bio-compatibility. David is constantly striving to provide the highest quality care available. He is a collaborator with Factor 2 (international supplier of facial prosthetic supplies) in product development and testing. This assures our patients access to the latest technologies.

Services include:

- Nasal Prosthetics
- Auricular Prosthesis
- Orbital prosthetics
- Osseointegrated implant systems including bar and magnetic retention
- Immediate post-operative temporary prosthetics (for some cases)
